

Task: Personalized News Feed Web Application Development using Node.js and React

Task Description:

- Design a user-friendly interface using React that allows the user to interact with the personalized news feed system.
- Implement a user registration and authentication function using Node.js. Users should be able to create an account and log in to save their preferences and settings.
- Allow users to search for articles by keywords and filter the results by date, category, and source.
- Provide a function for users to customize their news feed by selecting their preferred sources, categories, and authors.
- Integrate at least two of the provided APIs (NewsAPI, OpenNews, NewsCred, The Guardian, New York Times, BBC News, NewsAPI.org) to access articles using Node.js. Note that some APIs may require registration and authentication keys.
- Handle errors gracefully in your Node.js server, providing users with appropriate error messages when things go wrong.
- Implement appropriate security measures to protect the system and user data, such as secure handling of user authentication information and data validation, in your Node.js server.

APIs:

NewsAPI: This is a comprehensive API that allows developers to access articles from more than 70,000 news sources, including major newspapers, magazines, and blogs. The API provides access to articles in various languages and categories, and it supports search and filtering.

OpenNews: This API provides access to a wide range of news content from various sources, including newspapers, magazines, and blogs. It allows developers to retrieve articles based on keywords, categories, and sources.

NewsCred: The NewsCred API provides access to a wide range of news content from various sources, including newspapers, magazines, and blogs. The API allows developers to retrieve articles based on keywords, categories, and sources, as well as to search for articles by author, publication, and topic.

The Guardian: This API allows developers to access articles from The Guardian newspaper, one of the most respected news sources in the world. The API provides access to articles in various categories and supports search and filtering.

New York Times: This API allows developers to access articles from The New York Times, one of the most respected news sources in the world. The API provides access to articles in various categories and supports search and filtering.

BBC News: This API allows developers to access news from BBC News, one of the most trusted news sources in the world. It provides access to articles in various categories and supports search and filtering.

NewsAPI.org: This API provides access to news articles from thousands of sources, including news publications, blogs, and magazines. It allows developers to retrieve articles based on keywords, categories, and sources.
